

Base from USGS 1:250,000 UTUKOK RIVER 1956, 100 ft

DESCRIPTION OF MAP UNITS

UNCONSOLIDATED DEPOSITS

- Qal Floodplain and low terrace deposits
- Qgy Terrace deposits
- Qgo High-level gravel
- Qsm Silt and muck deposits
- Qds Debris slides
- Qsf Solifluction mantle
- Qt Thaw lake deposits
- Qus Upland silt
- Qb Marine beach (?) deposits

BEDROCK

- Kn Nanushuk Group rocks
- Kt Torok shale

SYMBOLS

- Contact, dashed where approximately located, queried where extreme doubt as to position
- - - Fault, dashed where approximately located; D - downthrown block, arrow showing dip direction
- ↗ Anticline showing direction of plunge
- ↘ Syncline showing direction of plunge
- pingo
- 27 fossil and/or radiocarbon dated locality
- △ coal outcrop (Martin and Callahan, 1978)
- coal reported in shallow seismic drill hole (Martin and Callahan, 1978)

CORRELATION OF MAP UNITS

Fossil and radiocarbon-dated localities

- 2 Fossil ivory (tusk), unnamed western-flowing stream between Kokolik and Utukok Rivers in northeast part of the quadrangle
- 45 Carbonized wood in frozen muck approximately 6 meters down from terrace surface dated at 4,960±100 years B.P. (I-11,145), east bluff of Kokolik River near west boundary of quadrangle. Approximately 6 meters of frozen silt, sand, and clay overlie sandy pebble gravel at this locality
- 30 Peat in frozen muck 1 meter down from top of terrace surface which is 30 meters above the Utukok River dated at 3,890±95 (I-11,154) years B.P. on east bluff of the Utukok River near the south border of the quadrangle. One to 2 meters of gravel underlie 1 to 2 meters of muck and overlie Torok shale at this locality
- 27 Plant fossils and carbonized and petrified stumps occur in the Nanushuk Group rocks along the Ivisaruk River near the northern boundary of the quadrangle. Two to 3 meters of orange-brown sand with well-rounded pebbles overlie the bedrock at this locality
- 8 Mammoth skull found in the east river bluff downstream from the junction of the east and west forks of the Kaolak River; skull found in place at the base of a 35-meter-thick section of sand and silt above 8 meters of gravel (O'Sullivan, 1961)
- 4 Saiga antelope metacarpal bone collected by P. S. Fladeland under the direction of W. Quide as reported in Harrington, 1981; found in the bank of the Kuk River about 2.5 km downstream from its junction with the Omingmaktoak River

Location Index

Published U.S. Geological Survey
Engineering - Geologic Maps of Northern Alaska
with Open-file numbers

- 1 Wainwright 83-467
- 2 Meade River 83-294
- 3 Point Lay
- 4 Lookout Ridge 83-279
- 5 DeLong Mountains
- 6 Misheguk Mountain
- 7 Howard Pass 84-401

Geology by W.E. Yeend, 1977, 1978, assisted
by Inyo Eilersieck, 1977, and Randy Ennis, 1978,
bedrock adapted from Mayfield and others, 1978,
coal locations from Martin and Callahan, 1978.

This map is preliminary and has
not been reviewed for conformity
with U.S. Geological Survey editorial
standards and stratigraphic nomenclature.
